

# Coordinating the Industry in a sustainable use of water

Svemin Environment Conference October 7

*Ulla Sandborgh, Director General*

Ministry for Enterprise and Innovation

# The Coordinator role

- Push the development within an area
- Investigate challenges
- Suggest development

More independent than the authorities.

# Background

WHY?

Water is essential for a functioning society and enterprise.

A sustainable use of water needs to be in balance with the available amount of water.

Warm weather and drought over some years has in some regions led to a stress on the water supply.

# The assignment

WHAT?

- Drive the development for a responsible usage of water
- Coordinate a huge amount of actors
- Support ongoing initiatives

# Way of working

HOW?

Dialog to promote exchange of experiences and cooperation.

Analyse conditions to develop more efficient processes when using water and the impact on Swedish competitiveness.

Identify areas that needs development.

# Some key findings

A holistic view is needed e.g. for permits.

Transparent and predictable processes for new and renewed permits is crucial.

Better availability of data, more measurements and digitalisation.  
Secure sharing of data.

The organisation to manage water nationally is important.

The significance of coordination between the industry and the municipality.

# Thank you!
